

SolarWinds Training NCM (SW-002) (1 Day)

Overview

SolarWinds Orion Network Configuration Manager is a comprehensive, intuitive solution designed to streamline and automate network configuration management. Orion Network Configuration Manager increases availability, saves time, improves security, and ensures policy adherence. Orion Network Configuration Manager features automation capabilities that reduce the amount of time network engineers spend on mundane network tasks, allowing them to focus on business-critical network projects.

Pre-Requisites

Individuals signing up for this course should have:

- General knowledge of TCP/IP
- Working knowledge of Windows or UNIX
- Experience networking

Target Audience

Technical Personnel who support and manage network infrastructure should attend this course. This could include the following:

- System Administrators
- Support Analysts
- IT Managers
- Network Engineers

Course Objectives

Upon successful completion of this course, participants should be able to:

- Installation and Deployment
- Manage Node
- Manage Accounts
- Manage Configuration Files
- Manage Inventory
- Scheduling Jobs
- Syslog Trap View Server
- Policy Report

SolarWinds Training NCM (SW-002) (1 Day)

Features

Out of the box, SolarWinds Orion Network Configuration Manager offers numerous management features, including the ability to:

- Control access based on user roles
- Schedule device configuration backups
- Implement configuration changes in bulk (IOS and firmware updates)
- Manage configuration changes to multiple devices from different vendors with change management templates
- Generate detailed configuration reports for inventory, change, and policy management
- Receive notification of device configuration changes
- Identify configuration violations through policy management reporting
- Automatically receive results of appropriate NCM actions with the Orion notification of an alerting device (Requires Integration Module)
- View detailed change history and side-by-side comparison of configurations
- Perform detailed device inventory for each managed device
- Track and view configuration changes made by users
- Access to your device configurations and configuration changes from whether an NCM or Orion web console (Requires Integration Module)
- Map the port connections for a specific network switch

Orion Network Configuration Manager allows you to easily manage configurations on heterogeneous, multi-vendor networks. Orion Network Configuration Manager supports routers, switches, firewalls, load balancers, and wireless access points from numerous vendors, including Cisco, Cisco ASA, Dell, Adtran, Arris, Aruba, Nortel, Nortel Alteon, Nortel BayStack, extreme, Marconi, Radware, Netscreen, Motorola, HP, Netscaler, Juniper and Foundry. You gain a single point of management. Whether you are faced with managing network configurations for 50 or 5,000 devices, Orion Network Configuration Manager provides you with an intuitive solution that immediately impacts the bottom line.
